

## Wallsticker Mounting Instructions

The wallstickers are easy to mount. Just follow these instructions carefully.

Make sure, the surface of your wall is clean and free from grease. If necessary, remove dust with a soft brush. Test the consistency of your wall with the small test sticker that comes with every order.

Wet paint must be completely dried-out before you mount the wallsticker and the plaster should not be too rough. Direct sunlight might macerate the adhesive.

### And that's how it works:

**1** Before you peel the protection foil off, bring your wallsticker in the right position. Fix it on two or three points on the top of the sticker with removable adhesive tape.

**2** Peel off the protection foil from the bottom to the half of the wallsticker. Use a felt squeegee to apply the lower half of the wallsticker gently. Move the squeegee from the center to the edges.

**3** Now you're ready to remove the adhesive tape on the top of your sticker and also the rest of the protection foil. Then apply the rest of your wallsticker carefully.

On rough plaster, you should not push to hard. It could harm the vinyl foil.

**4** You should press the sticker well against the wall now. Always move the squeegee from the center to the edges to prevent blistering.

**That's it!** Depending on the surface of your wall, it might be necessary to press the edges on the wall in the first few days.

Enjoy your wallsticker!
